# Preparation

The piplanning app setup tool is web-based and provides all the features to manage teams, licenses, PI Planning sessions and to configure the ALM integration.

Cloud

Self-hosted

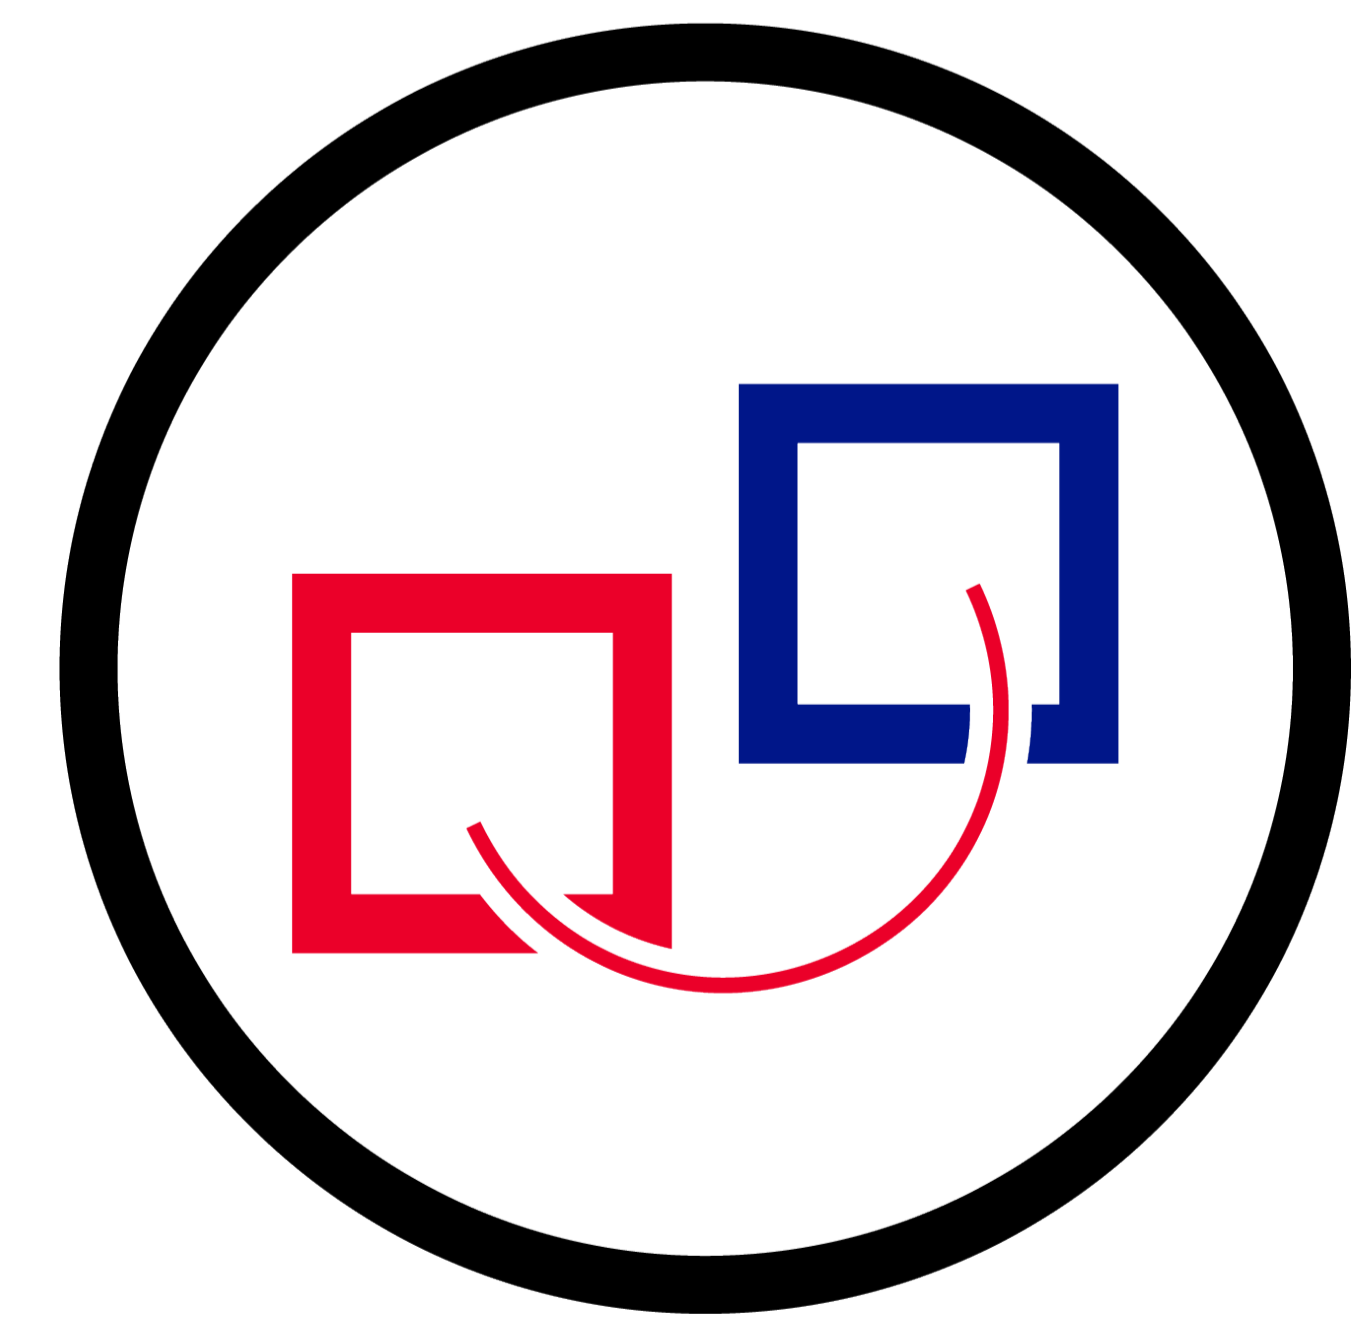

You can either use the piplanning app Cloud based or go with the Self-hosted version and have all the data on your own servers.

# SAFe® PI Planning

piplanning app

That's the application in which the actual planning happens. Your teams can download it from [piplanning.io/download](http://piplanning.io/download) and install it on as many touchscreens or laptops as needed for the PI Planning. They log in with their team credentials. All real-time synchronized and the planning results also synced with the configured ALM tool.

The desktop version of the piplanning app is available for Windows, MacOS and on request also for Linux.
